

HUNTER SERIES “Native Warm Season Grass Attachment” (NWSG KIT)

By PLOTMASTER™

H-NWSG-101-09

The NWSG Kit with new Versa-Seeding System is designed to keep small, fluffy seed including grass seed and NWSG's within the perfect planting zone (behind disc and in front of the drag and cultipacker).

Suggested Retail: \$249.00

You can disc, plant, cover and cultipack all at the same time. This will allow you to plant NWSG's and other grass seed in a single pass – saving valuable time, money and effort!

Using the NWSG Curtain in tandem with the Metal Grating is easy and simple to achieve. Remove the ½" x 3" pin from the Drag Connector, mount the curtain with the Bracket /Curtain supplied and simply slide your Drag connector back into place and you are ready to seed and cover grass seed and lofty type seeds with ease.

The (2) Piece bracket set is universal between the Hunter 400 and Hunter 300 Models. Just simply attach the bracket “tab” in the existing top bolt hole of the “Y” Bracket mount that secures the seeder assembly to the “Y” mount.
