Building Confidence at Hohokam Stadium, Phoenix, AZ

2 Tons of BallGameChanger were provided to Head Groundskeeper John Simonis.

At first, the product was applied very conservatively, where just a few bags of BallGameChanger were applied to the infield. As confidence grew, more product was applied. The staff learned they could water less and shorten the time between watering, soaking and grooming; which made game day prep and grooming easier.

Once they were familiar with BallGameChanger, the base paths, mound, and plate were treated for more water holding, infiltration, and moisture uniformity. Even in 110 degree heat, the infield was moist through entire games with just pre-game watering.

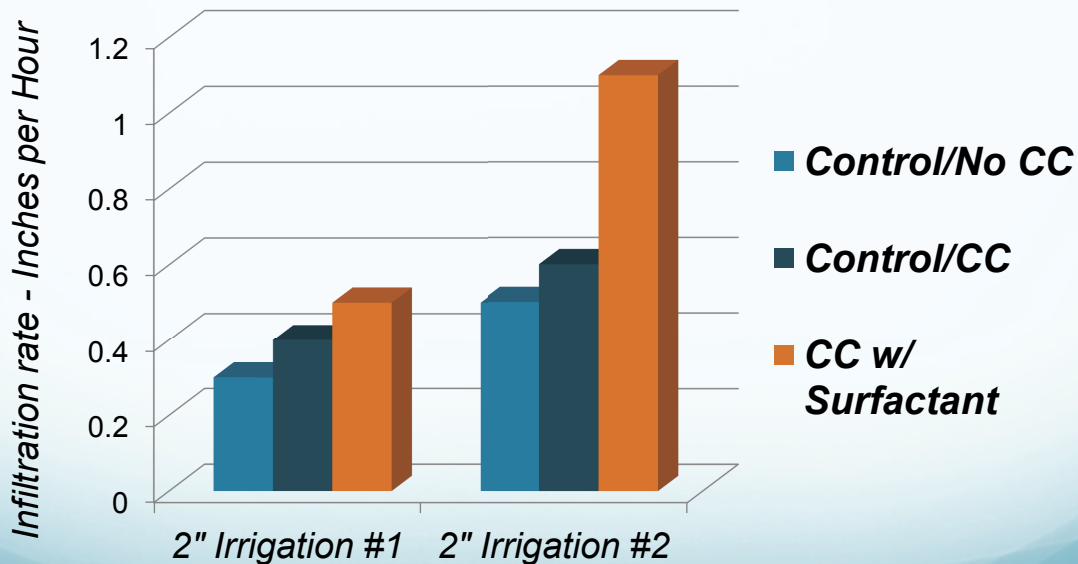

John Simonis Comments:

- Water Penetrates Easier & Quicker
- No Cracking of Pure Clay Mound
- Infield is Moist, But Firm
- Easy to Use and Work With
- Less Tracking of Infield Mix Off the Infield

BallGameChanger doubles Infiltration Rates over Calcined Clay. Period.

Calcined Clay with Surfactant – Infiltration Rates

1/8" Conditioner over Infield Mix (2" soil depth)

Calcined Clay with Surfactant – Infiltration Rates

1/8" Conditioner over Infield Mix (2" soil depth)
