

PEDIATRIC EMERGENCY BED

The standard adult model of the original Rapid Response Emergency Bed has been downsized for the pediatric market and includes all the standard features of the original. The Pediatric Emergency Bed is a cost effective solution that provides immediate additional bed capacity for surge overflow in the Emergency Department, a field hospital, or mass casualty incident. The Pediatric Emergency Bed system consists of an easy to assemble, knock-down patient gurney and a color coded, visual indicator that provides critical triage information to medical personnel at a single glance. Beds are sold individually or in a system of 5 beds with a heavy duty aluminum transport and storage cart with water proof cover.

The Pediatric Emergency Bed is constructed of the highest quality polyvinyl chloride resin structural tubing which will not chip, dent, crack, peel, fade, stain or sustain bacterial growth. The patient support sling is a vinyl coated polyester mesh and is tension adjustable for maximum patient comfort. The Pediatric Emergency Bed has been developed in conjunction with leading experts in the field of trauma and emergency medical care and has been field tested in rigorous multiple casualty disaster drills in hospitals in several states.
