Transplantability of Vegetables

EASILY SURVIVES

Broccoli
Cabbage
Cauliflower
Eggplant
Lettuce
Chinese (Napa) Cabbage
Onions
Tomato
Pepper
Leek
Brussel Sprouts

REQUIRES CARE

Beet
Carrot
Celery
Chard
Melon
Squash
Corn
Cucumber

NOT SUCCESSFUL

Bean
Pea
Okra
Radish

Critical Moisture Periods for Vegetables

This is the period in which vegetables need regular watering to ensure a good harvest. Lack of moisture at this critical period would produce fruit drop off or patchy or underdeveloped fruit.

CROP

Bean
Broccoli & related cole crops
Corn
Cucumber
Eggplant
Onion
Pea
Pepper
Potato
Tomato

GROWTH PERIOD

During flowering & pod development
During head formation & enlargement
From tassel to silk & ear filling
During flowering & fruit development
From blossom set thru fruit enlargement
During bulb formation
During flowering & pod filling
From blossom set thru fruit enlargement
After initial tubers form
From blossom set thru fruit enlargement
